PAGES

Your page dimensions must be 210mm (w) x 297mm (h)

MARGINS & BLEED

Please add 3mm bleed to your document. We recommend leaving a 15mm margin for important copy if you aren't looking to print off the edge of the pages. If your images are intended to go off the page and you don't include 3mm bleed you may end up with an inconsistent white margin when the document is cut.

IMAGES

300dpi recommended, CMYK or greyscale provides the best results - no spot colours. Black and white photos and artwork can be set to print CMYK or greyscale.

FONTS

We recommend using a point size of 9pt or above. Please make sure fonts are embedded when exporting your pdf.

PDFS

Where possible, use the PDF/X-1a:2001 preset. This creates the simplest kind of PDF, and takes care of almost everything that could cause issues at the press.

Export your file as a single page. Ensure you export your PDF with 3mm bleed and crop marks.
